

The Eye

ecclesiasticalresearches.com

Evolutionists believe that the complex systems found in living creatures were formed accidentally as a result of random-chance mutations. However, the Bible reported that King David acknowledged God's miraculous handiwork when he wrote: "You have formed my inward parts; You have covered me in my mother's womb. I will praise you, for I am fearfully and wonderfully made" (Psalm 139:13-14, NKJV).

Three thousand years ago, the wisest man in the world, King Solomon, wrote. "The hearing ear, and the seeing eye, the Lord hath made even both of them" (Proverbs 20:12).

Consider the case of the human eye and ask yourself whether or not such a complex and intricate optical system could ever have developed through random-chance mutation alone. When a baby is conceived in its mother's womb, the genetic DNA code governing the eye programs the baby's body to begin growing optic nerves simultaneously from both the optic center of the brain and from the eye.

A million microscopic optic nerves begin growing from the eye through the flesh toward the optical section of the baby's brain. Simultaneously, a million optic nerves, with a protective sheath similar to a fiber-optic cable, begin growing through the flesh towards the baby's eye. Each of these one-million optic nerves must find and match up to its precise mate to enable vision to function perfectly...

Charles Darwin himself admitted that the intricate engineering displayed in the human eye was so specialized and complex that he could not begin to imagine how the eye might have developed through the evolutionary processes of natural selection.
